

Why Choose US?

Our team consists of experts with experience in software production and renewable energy

- ✓ Usable for all people
- ✓ Build your own renewable power plant
- ✓ Artificial Intelligence based
- ✓ Saving time
- ✓ Saving money
- ✓ High quality
- ✓ High accuracy

Who can be Our Customer?

- Individual
- Corporation
- Government
- Renewable equipment seller
- Renewable equipment installer
- Renewable consultant

Application Features

- Finding the best location
- Finding the best equipment
- Feasibility study calculation
- Supporting all energy types
- Calculating the ability of mining cryptocurrency
- Computing the time of saving, selling or consumption of energy
- Finding the optimal locations for electric car charging stations

Our mission

We intend to increase the awareness of renewable energy sources and help individual, corporate, and governmental clients implement the most appropriate renewable energy solution based on their location and available funds

About Us

We have developed an online platform that will leverage Artificial Intelligence and machine learning technologies to optimally find the best location, equipment and the combination of energy types to achieve calculating annual production, the profitability of the project and providing a complete economic feasibility study for the establishment of renewable power plants. All these are only by using limited inputs data. Our platform will enable clients with every level of knowledge, to make optimal decisions.
